Letter to the editor of the Sunliter:

Dear Sunliter,

Have you used WAITLIST to set up a task in your own bank and wondered why you have to burden yourself with the useless second half of the 2CADR!?? Wonder no more! This innocent-looking prologue to WIATLIST (along with the inconsequential change of WAITLIST +3 from "INDEX A" to "INDEX WAITEXIT") makes it possible to follow the TC with a mere ADRES:-

```
TWIDDLE   TS    L
          CA    POSMAX
          ADS   Q
          CA    BBANK
          XCH   L
WAITLIST ...
```

Here is the calling sequence:-

```
          CAF   delay
          TC    TWIDDLE
          ADRES task.
```

Who else wants it? (Who can do it in fewer words?)

Your friend,

EYLES
